VOL. 275—Nos. 1645–1650
(138th Year)

JANUARY–JUNE, 1963

PHILADELPHIA
THE FRANKLIN INSTITUTE
Benjamin Franklin Parkway at 20th Street
1963

LANCASTER PRESS, INC., LANCASTER, PA.

INDEX TO VOLUME 275

January–June, 1963

SUBJECT INDEX

Entries with (C) are Current Topics; those with (N) are National Bureau of Standards News; those with (R) are Reader Opinion; those with (F) are Franklin Institute Laboratories. Papers are listed under subject headings, with authors' names in parentheses following the titles of their papers. Authors are listed, with titles of their papers, in alphabetical order in the Author Index.

A

Aerial survey method of natural landing areas, 459(C)

Aerosols. The determination of aerosol size distributions from diffusional decay measurements (Twomey), 121

Aerospace research. Miniature electrocardiographs for space pilots, 192(C)

Amplifiers. Low level parametric amplifier (Soltz), 79

Analysis. Analysis of linear distributed systems with random parameters and inputs (Tung and Wang), 381

Channel capacity of a realizable passive two-port (Horgan), 473

Contributions to the theory of time-optimal control (Kreindler), 314

Dynamic response of columns (Fleming and Liebold), 463

Optimization of communication nets with switching (Frisch), 405

Vibrations of a moving threadline (Swope and Ames), 36

Analytic signals. Analytic representation of wide-band radio frequency signals (Rubin and DiFranco), 197

Analyzers. Analyzer for airborne jamming equipment, 192(C)

Transmissibility ratio plotter, 265(C)

Anhydrous hydrazine aided Mariner II, 260(C)

Annular plates. Creep analysis of annular plates (Venkatraman and Patel), 13

Antarctic snowcap. Cosmic particles in Antarctic snow, 72(C)

Applied mathematics. Generation of orbits by generalized Hill curves (Szebehely), 371

Applied mechanics. Some applications of symbolic functions on beam problems (Pan), 303

Approximations. Partial difference approximations with non-negative coefficients (Greenspan), 481

Astronomy. TV astronomy, 454(C)

Atomic energy. "Hot" laboratory safeguarded by plastics, 455(C)

Axial loads. Dynamic response of columns (Fleming and Liebold), 463

Axi-symmetric magnetic fields and related problems (O'Brien), 24

B

Beams. Some applications of symbolic functions on beam problems (Pan), 303

Bioelectronics. Medics test new blood sensing system, 70(C)

Blood pressure. Medics test new blood sensing system, 70(C)

Bonding. New method of metal-to-thermoplastics bonding, 263(C)

Book reviews

Alt, Franz and Morris Rubinoff, ed.: Advances in computers, vol. 3, 154

Arnold, B. H.: Logic and Boolean algebra, 63

Au, Tung: Elementary structural mechanics, 252

Auslander, Louis and Robert E. MacKenzie: Introduction to differentiable manifolds, 436

Book Reviews (cont.)
Baade, Walter: Evolution of stars & galaxies, 524
Baldwin, Ernest: The nature of biochemistry, 62
Biegel, John E.: Production control—a quantitative approach, 352

C

Cameras. Ultra-high speed photography 364(C)
Carbon dioxide. Freeze dryer uses liquid carbon dioxide as coolant, 261(C)
Cast iron. Ductile cast iron for cryogenic use, 74(C)
Celestial mechanics. Generation of orbits by generalized Hill curves (Szebehely), 371
Ceramics. Hot press sintering vacuum furnace, 369(C)
Channel capacity of a realizable passive two-port (Horgan), 473
Channel switching. Optimization of communication nets with switching (Frisch) 405
Chapin, Daryl M. Wetherill Medal, 360
Chemicals. New family of industrial chemicals, 196(C)
Christofilos, Nicholas C.: Cresson Medal, 67
Circuits. Derivative-explicit differential equations for RLC graphs (Brown), 503
Circuits. Low level parametric amplifier (Soltz), 79
A new physical configuration of branches for the realization of reactive driving point functions (Navot), 217
Solid-state element combines properties of transistors and vacuum tubes, 459(C)
Clamer Medal. Keith R. Millis, 526
Columns. Dynamic response of columns (Fleming and Liebold), 463
Test mixture developed for evaluating highly efficient fractionating columns, 141(N)
Committee on Science and the Arts
Abstracts of meetings: November 14, 1962, 67; February 13, 1963, 360; March 13, 1963, 360; April 11, 1963, 444; May 9, 1963, 526
Communications. Analytic representation of wideband radio frequency signals (Rubin and DiFranco), 197
Gallium-arsenide diodes for lasers, 70(C)
"Hard-Copy" computer records, 529(C)
Injection laser, 72(C)
Large-screen color television projector, 460(C)
"Lasecon" electron tube, 531(C)
Light-emitting diode, 71(C)
Low-cost "flea" memory, 78(C)
New gaseous lasers, 530(C)
New type of silicon transistor, 265(C)
Nickel-cadmium cells in Relay communications satellite, 260(C)
OMNITAB, 345(N)
Optimization of communication nets with switching (Frisch), 405
The realizability of tunnel-diode-RC networks (Mitra), 205
Solid-state element combines properties of transistors and vacuum tubes, 459(C)
Solid-state telegraph relay, 528(C)
Space communications system solves reentry blackout problem, 74(C)
Transmission tube for Voice of America station, 366(C)
Computers. Automatic computation of eigenvalues in real potential wells, 247(N)
Experimental machine "reads" many styles of printing, 264(C)
"Hard-copy" computer records, 529(C)
Low-cost "flea" memory, 78(C)
OMNITAB, 345(N)
Conductors. Transient suspension forces caused by broken transmission line conductors (Elgerd), 227
Conformal coordinates. Conformal coordinates associated with space-like motions (Jones), 1
Control. Analysis of linear distributed systems with random parameters and inputs (Tung and Wang), 381
Contributions to the theory of time-optimal control (Kreindler), 314
Coolants. Freeze dryer uses liquid carbon dioxide as coolant, 261(C)
Corrosion. Corrosion of silver single crystals in molten salts, 515(N)
Cosmic particles. Cosmic particles in Antarctic snow, 72(C)
Creep. Creep analysis of annular plates (Venkatraman and Patel), 13
Cresson Medal. Nicholas C. Christofilos, 67

Cryogenics. Ductile cast iron for cryogenic use, 74(C)
New cryogenic refrigerator, 530(C)
Ultrasonic thermometer for low temperature determinations, 56(N)
Crystallography. High purity crystals grown from solution, 431(N)
Cylinders. On the displacements of a nonhomogeneous thick cylinder under uniform pressure (Chen), 88
A stress-strain relation for inelastic material behavior (Patel, Venkatraman and Bentson), 98

D

Data processing. Experimental machine "reads" many styles of printing, 264(C)
Solid state totalizer, 365(C)
Transmissibility ratio plotter, 265(C)
Decay integrals. The determination of aerosol sizes distributions from diffusional decay measurements (Twomey), 121
Density functions. A method for calculating the probability of detection for a coherent (AMTI) radar unit with phase cancellation (Bailey), 284
Detection. A method for calculating the probability of detection for a coherent (AMTI) radar unit with phase cancellation (Bailey), 284
Differential equations. Axi-symmetric magnetic fields and related problems (O'Brien), 24
Deravitive-explicit differential equations for RLC graphs (Brown), 503
Partial difference approximations with nonnegative coefficients (Greenspan), 481
Diffusion decay. The determination of aerosol size distributions from diffusional decay measurements (Twomey), 121
Diodes. Gallium-arsenide diodes for lasers, 70(C)
Injection laser, 72(C)
Light-emitting diode, 71(C)
Microwave mixer, 368(C)
The realizability of tunnel-diode-RC networks (Mitra), 205
Diphenyl oxide. New family of industrial chemicals, 196(C)
DNA. Genetic transformations with DNA, 194(C)
Doctoral degrees. The technological revolution of today—its impact on society (Berkner), 267
Dynamic response. A general procedure for calculating dynamic response due to impulsive loads (Fleming and Romualdi), 107
Dynamics. Dynamic response of columns (Fleming and Liebold), 463
Generation of orbits by generalized Hill curves (Szebehely), 371

E

Education. The technological revolution of today—its impact on society (Berkner), 267
Eigenvalues. Automatic computation of eigenvalues in real potential wells, 247(N)
Some applications of symbolic functions on beam problems (Pan), 303
Elasticity. Dynamic response of columns (Fleming and Liebold), 463
Electrical discharge theory. Solar jets and magnetic storms (Bruce), 139(R)
Electrical transients. Transient suspension forces caused by broken transmission line conductors (Elgerd), 227
Electrocardiographs. Miniature electrocardiographs for space pilots, 192(C)
Three-dimensional vectorcardiograph, 362(C)
Electronic tubes. Ultra-high speed photography, 364(C)
Emergency landings. Aerial survey method of natural landing areas, 459(C)
Engines. Satellite rocket engine ground tested at "orbital conditions," 259(C)
Space vehicle to test engines for interplanetary craft, 262(C)
Epstein, Herman. Longstreth Medal, 360

F

Fabrics. New optical polishing pad, 75(C)
Filter design. A new physical configuration of branches for the realization of reactive driving point functions (Navot), 217
Fire protection. Sensitive smoke detector, 533(C)
Flashover. Lightning protection of extra high voltage transmission lines (Rao), 392
Flow. Creep analysis of annular plates (Venkatraman and Patel), 13
Inclusion of the hydrostatic stress component in formulation of the yield condition (Hu and Pae), 491
Flux. Axi-symmetric magnetic fields and related problems (O'Brien), 24
Low-cost "flea" memory, 78(C)

Forestry. Non-woven pollination bags, 194(C)
The Franklin Institute
Committee on Science and the Arts. *See* Committee on Science and the Arts in main index
Elliott Cresson Medal Fund report, 157
Franklin Institute Laboratories. *See* main index
Journal of The Franklin Institute. *See* main index
Library. *See* Library of The Franklin Institute in main Index
Meetings. *See* Meetings in main index
Membership roll of honor, 356
Report of the Committee for the Preservation of the Liberty Bell, 161
Contributions by staff members, 445
Franklin Medal. Glenn Theodore Seaborg, 526
Freeze dryer uses liquid carbon dioxide as coolant, 261(C)
Frequency conversion. The realizability of tunnel-diode-RC networks (Mitra), 205
Frequency sources. New solid state microwave frequency sources, 368(C)
Fuel. Cooling of liquid hydrogen by injection of helium gas, 57(N)
New type of nuclear fuel, 193(C)
Fuller, Calvin S. Wetherill Medal, 360

G

Gallium arsenide. Gallium-arsenide diodes for lasers, 70(C)
Injection laser, 72(C)
Light-emitting diode, 71(C)
Gamma radiation. Nuclear detection devices, 77(C)
Genetics. Genetic transformations with DNA, 194(C)
Graduate education. The technological revolution of today—its impact on society (Berkner), 267
Graphs. Derivative-explicit differential equations for RLC graphs (Brown), 503
Optimization of communication nets with switching (Frisch), 405
Gyroscopes. Proposed experiment to test theory of relativity, 456(C)

H

Heart disease. Three-dimensional vectorcardiograph, 362(C)
Ultrasonics diagnoses heart disorder, 531(C)
Helium. Cooling of liquid hydrogen by injection of helium gas, 57(N)
Heredity. Genetic transformations with DNA, 194(C)
High voltage electricity. Lightning protection of extra high voltage transmission lines (Rao), 392
Transient suspension forces caused by broken transmission line conductors (Elgerd), 227
Horticulture. Non-woven pollination bags, 194(C)
Hydrostatic stress. Inclusion of the hydrostatic stress component in formulation of the yield condition (Hu and Pae), 491

I

Imbertson, Norman M. Longstreth Medal, 444
Industrial revolution. The technological revolution of today—its impact on society (Berkner), 267
Inelastic materials. A stress-strain relation for inelastic material behavior (Patel, Venkatraman and Bentson), 98

J

Journal of The Franklin Institute. The JOURNAL returns to monotype, 196(C)
Publications received: 61, 254, 354, 441, 521

L

Laplace transform. The determination of aerosol size distributions from diffusional decay measurements (Twomey), 121
Lasers. First plastic laser is developed, 454(C)
Gallium-arsenide diodes for lasers, 70(C)
Injection laser, 72(C)
"Lasecon" electron tube, 531(C)
Light-emitting diode, 71(C)
New gaseous lasers, 530(C)
Liberty Bell. Report of the Committee for the Preservation of the Liberty Bell, 161
Library of The Franklin Institute
New Books: 67, 157, 256, 361, 443, 526
Lightning protection. Lightning protection of extra high voltage transmission lines (Rao), 392
Linear systems. Analysis of linear distributed systems with random parameters and inputs (Tung and Wang), 381
Contributions to the theory of time-optimal control (Kreindler), 314

Liquid hydrogen. Cooling of liquid hydrogen by injection of helium gas, 57(N)
Loads. Dynamic response of columns (Fleming and Liebold), 463
A general procedure for calculating dynamic response due to impulsive loads (Fleming and Romualdi), 107
Some applications of symbolic functions on beam problems (Pan), 303
Longstreth Medal. Herman Epstein, 360
Norman M. Imbertson, 444

M

Magnetic storms. Solar jets and magnetic storms (Bruce), 139(R)
Magnetics. Axi-symmetric magnetic fields and related problems (O'Brien), 24
Ultrasonic waves rotated by magnetic field, 258(C)
Mariner II. Anhydrous hydrazine aided Mariner II, 260(C)
Mathematical physics. Conformal coordinates associated with space-like motions (Jones), 1
Measurement. Radio measurements of a man-made radiation belt, 142(N)
Medical science. Medics test new blood sensing system, 70(C)
New cryogenic refrigerator, 530(C)
Three-dimensional vectorcardiograph, 362(C)
Ultrasonics diagnoses heart disorder, 531(C)
Meetings of The Franklin Institute
Minutes of Stated Meeting: December 19, 1962, 66; January 16, 1963, 156; February 20, 1963, 255; March 20, 1963, 355; April 17, 1963, 442; May 15, 1963, 525
Memory devices. Low-cost "flea" memory, 78(C)
Message switching. Optimization of communication nets with switching (Frisch), 405
Metallurgy. Corrosion of silver single crystals in molten salts, 515(N)
Ductile cast iron for cryogenic use, 74(C)
Hot press sintering vacuum furnace, 369(C)
New method of metal-to-thermoplastics bonding, 263(C)
Oxidation of metals in molten salts, 246(N)
Report of the Committee for the Preservation of the Liberty Bell, 161
Ultrafine powders process, 75(C)
Meteorology. Electronic aid for storm observation, 367(C)
Microwaves. Microwave mixer, 368(C)
New solid state microwave frequency sources, 368(C)
Military science. Analyzer for airborne jamming equipment, 192(C)
Millis, Keith R. Clamer Medal, 526
Mixtures. Test mixture developed for evaluating highly efficient fractionating columns, 141(N)

N

National Part Service. Report of the Committee for the Preservation of the Liberty Bell, 161
Networks. Channel capacity of a realizable passive two-port (Horgan), 473
A new physical configuration of branches for the realization of reactive driving point functions (Navot), 217
Optimization of communication nets with switching (Frisch), 405
The realizability of tunnel-diode-RC networks (Mitra), 205
Nickel-cadmium cells. Nickel-cadmium cells in Relay communications satellite, 260(C)
Noise. Channel capacity of a realizable passive two-port (Horgan), 473
A method for calculating the probability of detection for a coherent (AMTI) radar unit with phase cancellation (Bailey), 284
Nonlinear equations. Partial difference approximations with non-negative coefficients (Greenspan), 481
Nuclear detection devices, 77(C)
Numerical procedures. A general procedure for calculating dynamic response due to impulsive loads (Fleming and Romualdi), 107

O

One-ports. The realizability of tunnel-diode-RC networks (Mitra), 205
Optics. New optical polishing pad, 75(C)
Optimal control. Contributions to the theory of time-optimal control (Kreindler), 314
Optimization of communication nets with switching (Frisch), 405
Orbit generation. Generation of orbits by generalized Hill curves (Szebehely), 371
Orbital vehicles. Engineers simulate re-entry from space, 77(C)
Orbiting platforms. Outer space "anchorages," 364(C)
Oxidation. Oxidation of metals in molten salts, 246(N)

P

Paints. Radiation sensitive paints, 266(C)
Parametric amplifiers. Low level parametric amplifier (Soltz), 79
Partial differential equations. Analysis of linear distributed systems with random parameters and inputs (Tung and Wang), 381
Partial difference approximations with non-negative coefficients (Greenspan), 481
Particle size. The determination of aerosol size distributions from diffusional decay measurements (Twomey), 121
Pearson, Gerald L. Wetherill Medal, 360
Phase cancellation. A method for calculating the probability of detection for a coherent (AMTI) radar unit with phase cancellation (Bailey), 284
Phase coded signals. Analytic representation of wide-band radio frequency signals (Rubin and DiFranco), 197
Photography. Ultra-high speed photography, 364(C)
Plasticity. Inclusion of the hydrostatic stress component in formulation of the yield condition (Hu and Pae), 491
Plastics. First plastic laser is developed, 454(C)
"Hot" laboratory safeguarded by plastics, 455(C)
Plates. Creep analysis of annular plates (Venkatraman and Patel), 13
Polarization. Ultrasonic waves rotated by magnetic field, 258(C)
Polishing pads. New optical polishing pad, 75(C)
Pollination. Non-woven pollination bags, 194(C)
Potentiometer. Commercial trimmer potentiometer, 532(C)
Powder metallurgy. Ultrafine powders process, 75(C)
Power failures. Lightning protection of extra high voltage transmission lines (Rao), 392
Transient suspension forces caused by broken transmission line conductors (Elgerd), 227
Pressure. On the displacements of a non-homogeneous thick cylinder under uniform pressure (Chen), 88
A stress-strain relation for inelastic material behavior (Patel, Venkatraman and Bentson), 98
Printing. Experimental machine "reads" many styles of printing, 264(C)
The JOURNAL returns to monotype, 196(C)
Probability. A method for calculating the probability of detection for a coherent (AMTI) radar unit with phase cancellation (Bailey), 284
Programming. Derivative-explicit differential equations for RLC graphs (Brown), 503
OMNITAB, 345(N)
Projectors. Large-screen color television projector, 460(C)
Pumps. World's fastest 16-in. vacuum diffusion pump, 195(C)

R

Radar. A method for calculating the probability of detection for a coherent (AMTI) radar unit with phase cancellation (Bailey), 284
Radiation. "Hot" laboratory safeguarded by plastics, 455(C)
Nuclear detection devices, 77(C)
Radiation sensitive paints, 266(C)
Radio measurements of a man-made radiation belt, 142(N)
Radio. Transmission tube for Voice of Americal station, 366(C)
Radio frequencies. Analytic representation of wide-band radio frequency signals (Rubin and DiFranco), 197
Ratio plotter. Transmissibility ratio plotter, 265(C)
RC networks. The realizability of tunnel-diode-RC networks (Mitra), 205
Reactive driving point functions. A new physical configuration of branches for the realization of reactive driving point functions (Navot), 217
Reactors. New type of nuclear fuel, 193(C)
Real potential wells. Automatic computation of eigenvalues in real potential wells, 247(N)
Re-entry. Engineers simulate re-entry from space, 77(C)
Refrigeration. New cryogenic refrigerator, 530(C)
Relativity. Conformal coordinates associated with space-like motions (Jones), 1
Proposed experiment to test theory of relativity, 456(C)
Reliability. Reliability for spacecraft, 528(C)
RLC graphs. Derivative-explicit differential equations for RLC graphs (Brown), 503

S

Safety engineering. Sensitive smoke detector, 533(C)
Salts. Corrosion of silver single crystals in molten salts, 515(N)
Oxidation of metals in molten salts, 246(N)
Seaborg, Glenn Theodore. Franklin Medal, 526
Signal analysis. Low level parametric amplifier (Soltz), 79
Signals. Analytic representation of wideband radio frequency signals (Rubin and DiFranco), 197
Size distribution. The determination of aerosol size distributions from diffusional decay measurements (Twomey), 121
Solar jets. Solar jets and magnetic storms (Bruce), 139(R)
Solid state physics. High purity crystals grown from solution, 431(N)
New solid state microwave frequency sources, 368(C)
Solid-state element combines properties of transistors and vacuum tubes, 459(C)
Solid-state telegraph relay, 528(C)
Solid state totalizer, 365(C)
Space research. Anhydrous hydrazine aided Mariner II, 260(C)
Cosmic particles in Antarctic snow, 72(C)
Engineers simulate re-entry from space, 77(C)
"Lasecon" electron tube, 531(C)
Nickel-cadmium cells in Relay communications satellite, 260(C)
Outer space "anchorages," 364(C)
Proposed experiment to test theory of relativity, 456(C)
Satellite rocket engine ground tested at "orbital conditions," 259(C)
Space communications system solves reentry blackout problem, 74(C)
Space vehicle to test engines for interplanetary craft, 262(C)
Reliability for spacecraft, 528(C)
Space trajectories. Generation of orbits by generalized Hill curves (Szebehely), 371
Spectrum. Analyzer for airborne jamming equipment, 192(C)
Stability. Analysis of linear distributed systems with random parameters and inputs (Tung and Wang), 381
Standards. High purity crystals grown from solution, 431(N)
Statistical analysis. Analysis of linear distributed systems with random parameters and inputs (Tung and Wang), 381
Sterilization. Radiation sensitive paints, 266(C)
Storms. Electronic aid for storm observation, 367(C)
Strain. A stress-strain relation for inelastic material behavior (Patel, Venkatraman and Bentson), 98
Stress. Inclusion of the hydrostatic stress component in formulation of the yield condition (Hu and Pae), 491
A stress-strain relation for inelastic material behavior (Patel, Venkatraman and Bentson), 98
Stress distribution. On the displacements of a nonhomogeneous thick cylinder under uniform pressure (Chen), 88
Structural analysis. Report of the Committee for the Preservation of the Liberty Bell, 161
Structural dynamics. Dynamic response of columns (Fleming and Liebold), 463
A general procedure for calculating dynamic response due to impulsive loads (Fleming and Romualdi), 107
Subminaturization. Commercial trimmer potentiometer, 532(C)
Surge. Lightning protection of extra high voltage transmission lines (Rao), 392
Suspension forces. Transient suspension forces caused by broken transmission line conductors (Elgerd), 227
Switching. New type of silicon transistor, 265(C)
Optimization of communication nets with switching (Frisch), 405
Symbolic functions. Some applications of symbolic functions on beam problems (Pan), 303
Systems. Channel capacity of a realizable passive two-port (Horgan), 473
Partial difference approximations with nonnegative coefficients (Greenspan), 481

T

Teaching devices. Thermoelectronics teaching unit, 458(C)
Technology. The technological revolution of today—its impact on society (Berkner), 267

Telegraphy. Solid-state telegraph relay, 528(C)
Telemetry. Space communications system solves re-entry blackout problem, 74(C)
Television. Large-screen color television projector, 460(C)
TV astronomy, 454(C)
Temperature. Ultrasonic thermometer for low temperature determinations, 56(N)
Testing. Reliability for spacecraft, 528(C)
Satellite rocket engine ground tested at "orbital conditions," 259(C)
Space vehicle to test engines for interplanetary craft, 262(C)
X-ray vidicon tubes, 367(C)
Textiles. Vibrations of a moving threadline (Swope and Ames), 36
Thermoelectricity. Thermoelectronics teaching unit, 458(C)
Thermometers. Ultrasonic thermometer for low temperature determinations, 56(N)
Thermoplastics. New method of metal-to-thermoplastics bonding, 263(C)
Thin films. Thin film vacuum coater, 456(C)
Threadlines. Vibrations of a moving threadline (Swope and Ames), 36
Time-optimal control. Contributions to the theory of time-optimal control (Kreindler), 314
Totalizers. Solid state totalizer, 365(C)
Transformations. Conformal coordinates associated with space-like motions (Jones), 1
Transistors. New type of silicon transistor, 265(C)
Transmission. Lightning protection of extra high voltage transmission lines (Rao), 392
Transient suspension forces caused by broken transmission line conductors (Elgerd), 227
Transmission tube for Voice of America station, 366(C)
Tubes. X-ray vidicon tubes, 367(C)
Tunnel diodes. The realizability of tunnel-diode-RC networks (Mitra), 205
Two-ports. Channel capacity of a realizable passive two-port (Horgan), 473

U

Ultrasonics. Ultrasonic waves rotated by magnetic field, 258(C)
Uranium. New type of nuclear fuel, 193(C)
New use for depleted uranium, 457(C)

V

Vacuum. Hot press sintering vacuum furnace, 369(C)
Thin film vacuum coater, 456(C)
Ultrafine powders process, 75(C)
World's fastest 16-in. vacuum diffusion pump, 195(C)
Vector fields. Axi-symmetric magnetic fields and related problems (O'Brien), 24
Velocity. Conformal coordinates associated with space-like motions (Jones), 1
Vibrations. A general procedure for calculating dynamic response due to impulsive loads (Fleming and Romualdi), 107
Vibrations of a moving threadline (Swope and Ames), 36

W

Waste disposal. New use for depleted uranium, 457(C)
Wetherill Medal. Daryl M. Chapin, 360
Calvin S. Fuller, 360
Gerald L. Pearson, 360

X

X-ray. X-ray vidicon tubes, 367(C)

Y

Yarn traverse problem. Vibrations of a moving threadline (Swope and Ames), 36
Yield. Inclusion of the hydrostatic stress component in formulation of the yield condition (Hu and Pae), 491

AUTHOR INDEX

Full titles of papers are listed only under first authors; all co-authors are cross-referenced to the full entry. Entries with (R) indicate Reader Opinion.

SUBJECT INDEX

Entries with (AE) are Atomic Energy News; Current Topics (C); those with (N) are National Bureau of Standards News; with (B) are Bartol Research Foundation Notes. Papers are listed under subject headings, with authors' names in parentheses following the title of the paper. Authors are listed, with titles of their papers in alphabetical order in the Author Index.

A

Accelerometer use of Hall effect. A Hall effect accelerometer (Nalecz and Ziomecki), 14

Acoustics. New 'Flextensional' transducers, 268(C)

Active networks. Stability of linear active nonreciprocal *N*-Ports (Ku), 207

Alumina crystals. Crystal growing machine, 188(C)

Analog computers. An application of discrete optimal control theory (Polak), 118

Analysis of oscillator. Envelope stability of a thermistor controlled oscillator (Kim and Zweig), 51

Anisotropic elasticity. Theory of stability of multilayered continua in finite anisotropic elasticity (Biot), 128

Antennas. Optimal signal-to-noise ratio for linear arrays by the Schwartz inequality (Kritikos), 295

Anti-particles. Production of a new anti-particle, 346(C)

Application of delta function to beams. On beams with many elastic supports (Chen), 273

Applied mechanics. On the logarithmic hypothesis of plane dislocation stress potential functions (Ju), 95

Armor plate. A viscous model for plug formation in plates (Pytel and Davids), 394

Astrodynamics. An impulsive force required to effectuate a new orbit through a given point in space (Magiros), 475

Astronautics. Mechanics of variable mass systems (Grubin), 305

Automatic control. Adjoint method in the sensitivity analysis of optimal systems (Gavrilovic, Petrovic, and Siljak), 26

Automated crystal growing. Crystal growing machine, 188(C)

B

Ballantine Medal: Arthur C. Clarke, 86

Bandpass filters. Bandpass filtering with lowpass filters (Urkowitz), 1

Bartol Research Foundation
Current Publications: 180

Beams. New laser research, 266(C)
Nonlinear response of a beam to shock pulse (Schultz), 385

Beams with elastic supports. On beams with many elastic supports (Chen), 273

C

Capacitor seals. Wet tantalytic capacitor seals, 458(C)
Carnot function. A note on the Carnot function (Potter), 507
Cathode tubes. Powerful new CW microwave tube, 453(C)
Ceramics. 100-megawatt hydrogen thyratron, 456(C)

Cesium chloride compound. Infrared structural analysis of new Cesium chloride compound, 333(N)
Chemistry. New production of non-weapon material, 541(AE)
Chemistry. Reactor produces rare elements in 'quantity,' 542(AE)
Chemists. Enzyme chemists report new findings, 92(C)
Circuit theory. On the number of classes of (n,k) switching networks (Harrison), 313
Stability of linear active nonreciprocal N-Ports (Ku), 207
Time-varying sequential machines (Gill), 519
Clarke, Arthur C: Ballantine Medal, 86
Clark Medal: Paul Ganser, 86
Combinatorial analysis. On the number of classes of (n,k) switching networks (Harrison), 313
Committee on Science and the Arts
Abstract of meetings: June 12, 1963, 86; October 9, 1963, 444
Communications. Optimal signal-to-noise ratio for linear arrays by the Schwartz inequality (Kritikos), 295
Communications equipment. Mobility engineers test Stirling Cycle engine, 345(C)
Communication system. New communication system to penetrate plasma sheath, 574(C)
Components. New Opto-Electronic device, 573(C)
Computers. Analog computer for plasma thermometry, 441(N)
Automated police system, 187(C)
The matric computor (Honnell), 282
Time-varying sequential machines (Gill), 519
Continuous beam problem. On beams with many elastic supports (Chen), 273
Continuous mechanics. Shock dynamics of hypervelocity impact of metals (Huang and Davids), 39
Control gauges. Vacuum gauge control system, 90(C)
Control systems. On the final value and minimum effort systems (Hsieh), 154
Convection heat transfer. Spherical shell heat exchanger—dirichlet problem (Cobble), 197
Corrosion of metals. Stress corrosion studies of stainless steel, 441(N)
Cryogenics. New cryogenic container, 267(C)
New high field cryogenic magnet, 545(N)
Star temperatures found low, 575(C)
Cryopump. First commercial cryopump, 270(C)
Crystal growing device. Crystal growing machine, 188(C)
Cylindrical Shells. A useful solution for short cylindrical shells and other applications (Moore), 490

D

Data processing. Micro-processing units speed document handling, 91(C)
Differential equations—inhomogeneous. A note on differential equations for Hertz potentials in inhomogeneous media (Samaddar), 225
Dilatometer. Fabry-Perot interferometer used as a dilatometer, 253(N)
Diodes. New mixer diode, 88(C)
Discrete systems. An application of discrete optimal control theory (Polak). 118
Dislocation theory. On the logarithmic hypothesis of plane dislocation stress potential functions (Ju), 95
Doppler radar systems. New mixer diode, 88(C)
Drinkable sea water. Drinking water from the sea, 183(C)
Dust wall shield. Dust wall helps shield spacecraft from meteoroids, 575(C)

E

Earthquake detection. Underground explosion detection, 573(C)
Elastic stability of multilayers. Theory of stability of multilayered continua in finite anisotropic elasticity (Biot), 128
Electric oscillator. Envelope stability of a thermistor controlled oscillator (Kim and Zweig), 51
Electromagnetic waves. A note on differential equations for Hertz potentials in inhomogeneous media (Samaddar), 225
Electromagnets. 100,000 Gauss magnetic field, 184(C)
Electron beam. Dual-purpose electron beam, 457(C)
Electron thermometer. Plasma temperature in fusion research, 270(C)
Electronic analogue computor. The matric computor (Honnell), 282

Elements. New production of non-weapon material, 541(AE)
Enzyme. Enzyme chemists report new findings, 92(C)
Epoxy. New roplast epoxy formulation, 344(C)
Euler function series. Spherical shell heat exchanger—dirichlet problem (Cobble), 197
Evershed effect. The Evershed effect (Bruce), 407
Explosion detection. Underground explosion detection, 573(C)

F

Fabry-Perot interferometer. Fabry-Perot interferometer used as a dilatometer, 253(N)
Fallout detector. Dancing red beads tell of radiation danger, 344(C)
Final value control systems. On the final value and minimum effort systems (Hsieh), 154
Flexotensional transducer. New 'Flextensional' transducers, 268(C)
Flow. Radial flow apparatus for thermal conductivity measurements, 168(N)
Flow transducer. Mass flowmeter for tungsten hexafluoride, 345(C)
Fluid detector. Fluid interface detector, 186(C)
Focal length measure. Rapid method for focal length determination, 254(N)
The Franklin Institute
  Committee on Science and the Arts. *See* main index
  Journal of The Franklin Institute. *See* main index
  Library. *See* main index
  Medal Day proceedings, 546
  Meetings. *See* main index
  Franklin medal. Glenn T. Seaborg, 562
Fresnel solar reflector. Solar reflector, 189(C)
Fuel cells. New fuel cell demonstrated, 87(C)

G

Gages. New gravimetric hygrometer, 328(N)
Gages. Plasma temperature in fission research, 270(C)
Gallium arsenide lasers. Modulation of Gallium arsenide lasers, 576(C)
  New Gallium Arsenide Laser, 183(C)
Ganser, Paul: Clark Medal, 86
Generators. High-speed character generator, 576(C)
  New neutron generators provide high yield at low cost, 345(C)
  Radioactive material generates electricity for new satellite signals, 540(AE)
Glass. New underwater glass platform, 269(C)
Gravimetric hygrometer. New gravimetric hygrometer, 328(N)
Gravity instability of viscoelastic multilayers. Stability of multilayered continua including the effect of gravity and viscoelasticity (Biot), 231

H

Hall effect accelerometer. A Hall effect accelerometer (Nalecz and Ziomecki), 14
Heat flow. Radial flow apparatus for thermal conductivity measurements, 168(N)
Heaviside. On the continuation of the idea of Heaviside in the operational calculus (Bellert), 411
Henderson Medal: Henri Ruhlmann, 86
Hertz potentials. A note on differential equations for Hertz potentials in inhomogeneous media (Samaddar), 225
High order nonlinear systems. On Liapunov functions of high order nonlinear systems (Ku and Puri), 349
High speed generators. High-speed character generator, 576(C)
High temperatures. New vacuum resistance furnace, 453(C)
Hulm, John K: Wetherill Medal, 444
Humidity measurement. Stratosphere moisture probed by infrared spectroscopy. 329(N)
Hydraulics. New shock absorber system, 271(C)
Hydrocarbon fuels. New fuel cell demonstrated, 87(C)
Hydrogen thyratron. 100-megawatt hydrogen thyratron 456(C)
Hypervelocity meteoroid simulator. Meteoroids' effect studied, 267(C)
Hypervelocity phenomena. Shock dynamics of hypervelocity impact of metals (Huang and Davids), 39

I

Impulses. Bandpass filtering with lowpass filters (Urkowitz), 1

Information storage. Automated police system, 187(C)
Infrared. Infrared structural analysis of new cesium chloride compound, 333(N)
Infrared spectroscopy. Low temperature infrared spectroscopy of inorganic carbonates and nitrates, 331(N)
Infrared spectroscopy. Stratosphere moisture probed by infrared spectroscopy, 329(N)
Instability of multilayered media. Stability of multilayered continua including the effect of gravity and viscoelasticity (Biot), 231
Instruments. New scanning spectrometer, 453(C)
Interference fringes. NBS laser produces interference fringes, 74(N)

J

Journal of The Franklin Institute
Publications received: 83, 179, 262, 340, 452, 572

K

Kunzler, John Eugene: Wetherill Medal, 444

L

Lanthanum trifluoride crystals. Laser crystals produced, 186(C)
LaPlace transformations. On the continuation of the idea of heaviside in the operational calculus (Bellert), 411
Lasers. Laser control technique developed, 88(C)
Laser crystals produced, 186(C)
Modulation of Gallium arsenide lasers, 576(C)
NBS laser produces interference fringes, 74(N)
New Gallium-arsenide laser, 183(C)
New laser research, 266(C)
New pulsed ruby laser, 576(C)
Laser crystals. Laser crystals produced, 186(C)
Lens measure. Rapid method for focal length determination, 254(N)
Levy Medal: Sik-Sang Yau, 86
Liapunov functions. On Liapunov functions of high order nonlinear systems (Ku and Puri), 349
Second method of Liapunov and Routh's canonical form (Puri and Weygandt), 365
Library of The Franklin Institute
New Books: 85, 181, 263, 342, 445, 565
Light amplification. New laser research, 266(C)
Light transmission. Laser control technique developed, 88(C)
Linear displacement measure. Fabry-Perot interferometer used as a dilatometer, 253(N)
Linear momentum. Mechanics of variable mass systems (Grubin), 305
Linear systems. An application of discrete optimal control theory (Polak), 118
Bandpass filtering with lowpass filters (Urkowitz), 1
Liquid hydrogen chamber. 80-inch bubble chamber, 185(C)
Loaded string in vibration. Vibration of a string with attached concentrated masses (Chen), 191
Logarithmic theory. Applications of logarithmic theory of plane elastic dislocations (Ju, Kana and Sieger), 106
Low temperature. New cryogenic container, 267(C)
New high field cryogenic magnet, 545(N)
Star temperature found low, 575(C)
Low temperature measurement. Low temperature infrared spectroscopy of inorganic carbonates and nitrates, 331(N)
Low temperature pump. First commercial cryopump, 470(C)

M

Magnetic fields. 100,000 Gauss magnetic field, 184(C)
Magnetics. New high field cryogenic magnet, 545(N)
Magnetometer support. New underwater glass platform, 269(C)
Man-made lightning. Man-made lightning, 574(C)
Marine biology. Research vessel uses closed circuit TV, 265(C)
Mars flowmeter. Mass flowmeter for Tungsten hexafluoride, 345(C)
Matthias, Bervd T: Wetherill Medal, 444
Matric computer. The matric computor (Honnell), 282
Matrix formulation of Liapunov functions. On Liapunov functions of high order nonlinear systems (Ku and Puri), 349
Matter. Production of a new anti-particle, 346(C)

Mechanical behavior of engrg. materials. Shock dynamics of hypervelocity impact of metals (Huang and Davids), 39
Mechanical measurements—use of Hall effect. A Hall effect accelerometer (Nalecz and Ziomecki), 14
Mechanics of impact. Shock dynamics of hypervelocity impact of metals (Huang and Davids), 39
Meetings of The Franklin Institute
Minutes of the Stated Meeting: October 16, 1963, 443; November 20, 1963, 567
Melting device. Dual-purpose electron beam, 457(C)
Metallurgy. New vacuum resistance furnace, 453(C)
Meteoroids. Meteoroids' effect studied, 267(C)
Meteoroid protection. Dust wall helps shield spacecraft from meteoroids, 575(C)
Meterological phenomena. Radar to see winds aloft in clear air, 92(C)
Microminiaturization. Microminiature thin-film amplifier, 455(C)
Micro-processing units. Micro-processing units speed document handling, 91(C)
Microwave energy. Microwave power generators, 189(C)
Microwave tubes. Powerful new CW microwave tube. 453(C)
Military engineering. Army and industry cooperate on new tractor, 94(C)
Mobility engineers test Stirling cycle engine, 345(C)
New tactical transporter, 455(C)
Universal mine detector, 455(C)
Mine detection. Universal mine detector, 455(C)
Missile radiation device. New device studies missile radiation, 454(C)
Mist heat transfer. Drinking water from the sea, 183(C)
Moisture probe. Stratosphere moisture probed by infrared spectroscopy, 329(N)
Molecules. Enzyme chemists report new findings, 92(C)
Momentum. Mechanics of variable mass systems (Grubin), 305
Monorail sleds. Spike monorail sleds, 476(C)
Multilayered continua. Theory of stability of multilayered continua infinite anisotropic elasticity (Biot), 128

N

Networks. On the number of classes of (n,k) switching networks (Harrison), 313
Networks. Stability of linear active nonreciprocal N-ports (Ku), 207
Neutron generators. New neutron generators provide high yield at low cost, 345(C)
Niostan. Superconductor breakthrough, 346(C)
Non-linear analysis. Envelope stability of a thermistor controlled oscillator (Kim and Zweig), 51
Nuclear chemistry. Recent researches on the transuranium elements (Seaborg), 459
Nuclear fallout detector. Dancing red beads tell of radiation danger, 344(C)
Nuclear interaction chamber. 80-inch bubble chamber, 185(C)
Nuclear power source. Radioactive material generates electricity for new satellite signals, 540(AE)

O

Operational calculus. On the continuation of the idea of Heaviside in the operational calculus (Bellert), 411
Optics. Rapid method for focal length determination, 254(N)
Optics. Research vessel uses closed circuit TV, 265(C)
Optimal control theory. An application of discrete optimal control theory (Polak), 118
On the final value and minimum effort systems (Hsieh), 154
Optimal processes. Adjoint method in the sensitivity analysis of optimal systems (Gavrilovic, Petrovic and Siljak), 26
Optoelectronics. New opto-electronic device, 573(C)
Orbital mechanics. An impulsive force required to effectuate a new orbit through a given point in space (Magiros), 475

P

Partial differential equations. Spherical shell heat exchanger-dirichlet problem (Cobble), 197
Penetration mechanics. A viscous model for plug formation in plates (Pytel and Davids), 394

Periodic table of elements. Recent research on the transuranium elements (Seaborg), 459
Physics. Production of a new anti-particle, 346(C)
Plane elastic dislocations. Applications of logarithmic theory of plane elastic dislocations (Ju, Kana and Sieger), 106
Plasmas. New communication system to penetrate plasma sheath, 574(C)
Plasma temperature in fusion research, 270(C)
Plasma physics. Superconductor breakthrough, 346(C)
Plasma thermometry. Analog computer for plasma thermometry, 441(N)
Plastics. Dancing red beads tell of radiation danger, 344(C)
Plug formation. A viscous model for plug formation in plates (Pytel and Davids), 394
Police automation system. Automated police system, 187(C)
Polymers. Mechanism of polystyrene degradation, 170(N)
Polystyrene. Mechanism of polystyrene degradation, 170(N)
Portable lightning machine. Man-made lightning, 574(C)
Power generators. Microwave power generators, 189(C)
Precision instruments. New gravimetric hygrometer, 328(N)
Pressure vessels, cylindrical. A useful solution for short cylindrical shells and other applications (Moore), 490
Pulsed ruby lasers. New pulsed ruby laser, 576(C)
Pumps. First commercial cryopump, 270(C)

R

Radar. Radar to see winds aloft in clear air, 92(C)
Radiation. Methods for determining thermal radiation properties of materials developed, 544(N)
NBS laser produces interference fringes, 74(N)
Radiation detection. Dancing red beads tell of radiation danger, 344(C)
Radiation diffraction. Optimal signal-to-noise ratio for linear arrays by the Schwartz inequality (Kritikos), 295
Radioactive Materials. New production of nonweapon material, 541(AE)
Radioactive material generates electricity for new satellite signals, 540(AE)
Radiation measurement. New scanning spectrometer, 454(C)
Radiation study device. New device studies missile radiation, 454(C)
Reactor measurement. New neutron generators provide high yield at low cost, 345(C)
Re-entry. New device studies missile radiation, 454(C)
Reflected solar energy. Solar reflector, 189(C)
Refrigeration. New cryogenic container, 267(C)
Resistors. High resistance films produced, 89(C)
Rocketry. Sled separation tests, 456(C)
Rocket sleds. Spike monorail sleds, 456(C)
Rocket sled testing. Sled separation tests, 456(C)
Roplast epoxy formulation. New roplast epoxy formulation, 344(C)
Routh's canonical transformations. Second method of Liapunov and Routh's canonical form (Puri and Weygandt), 365
Ruhlmann, Henri: Henderson Medal, 86

S

Saline water. Drinking water from the sea, 183(C)
Seals. Wet tantalytic capacitor seals, 458(C)
Semiconductors, Hall effect technical application. A Hall effect accelerometer (Nalecz and Ziomecki), 14
Sensitivity analysis of dynamic systems. Adjoint method in the sensitivity analysis of optimal systems (Gavrilovic, Petrovic and Siljak), 26
Sequential machines. Time-varying sequential machines (Gill), 519
Service system. Space-vehicle service system, 454(C)
Shell theory. A useful solution for short cylindrical shells and other applications (Moore), 490
Shock absorbers. New shock absorber system, 271(C)
Shock response. Nonlinear response of a beam to shock pulse (Schultz), 385
Shock waves in solids. Shock dynamics of hypervelocity impact of metals (Huang and Davids), 39

Signal detection. Optimal signal-to-noise ratio for linear arrays by the Schwartz inequality (Kritikos), 295
Signals. Bandpass filtering with lowpass filters (Urkowitz), 1
Sleds. Spike monorail sleds, 456(C)
Solar jets. The Evershed effect (Bruce), 407
Solid mechanics. On the logarithmic hypothesis of plane dislocation stress potential functions (Ju), 95
Shock dynamics of hypervelocity impact of metals (Huang and Davids), 39
Solid state laser. Laser control technique developed, 88(C)
Space particles. Meteoroids' effect studied, 267(C)
Space propellant equipment. Space-vehicle service system, 454(C)
Space science. An impulsive force required to effectuate a new orbit through a given point in space (Magiros), 475
Space shuttle. Space shuttle simulator, 90(C)
Space simulator. Space shuttle simulator, 90(C)
Space vehicles. Space-vehicle service system, 454(C)
Spectrometer. New scanning spectrometer, 453(C)
Spectroscopy. Analog computer for plasma thermometry, 441(N)
Low temperature infrared spectroscopy of inorganic carbonates and nitrates, 331(N)
Stratosphere moisture probed by infrared spectroscopy 329(N)
Spherical coordinate system. Spherical shell heat exchanger—dirichlet problem (Cobble), 197
Stability. High resistance films produced, 89(C)
Stability of linear active nonreciprocal *N*-Ports (Ku), 207
Stability of anisotropic plates. Stability of multilayered continua including the effect of gravity and viscoelasticity (Biot), 231
Stability of nonlinear systems. On Liapunov functions of high order nonlinear systems (Ku and Puri), 349
Second method of Liapunov and Routh's canonical form (Puri and Weygandt), 365
Stability theory. Theory of stability of multilayered continua in finite anisotropic elasticity (Biot), 128
Stainless steel corrosion. Stress corrosion studies of stainless steel, 441(N)
Standard cells. Controlled temperature oil baths for standard cells, 172(N)
Stirling cycle engine. Mobility engineers test Stirling cycle engine, 345(C)
Strain gage. Fabry-Perot interferometer used as a dilatometer, 253(N)
Stresses. Applications of logarithmic theory of plane elastic dislocations (Ju, Kana and Sieger), 106
Stress corrosion. Stress corrosion studies of stainless steel, 441(N)
Stress waves. A viscous model for plug formation in plates (Pytel and Davids), 394
String with concentrated gases. Vibration of a string with attached concentrated masses (Chen), 191
Structural analysis. Infrared structural analysis of new cesium chloride compound, 333(N)
Structural dynamics. Nonlinear response of of a beam to shock pulse (Schultz), 385
Sturm-Liouville system. Spherical shell heat exchanger—dirichlet problem (Cobble), 197
Sun spots. The Evershed effect (Bruce), 407
Superconductivity. 100,000 Gauss magnetic field, 184(C)
Superconductors. Superconductor breakthrough, 346(C)
Surface radar. Radar to see winds aloft in clear air, 92(C)
Switches. New roplast epoxy formulation, 344(C)
Switching theory. On the number of classes of (n,k) switching networks (Harrison), 313

T

Tactical transporter. New tactical transporter, 455(C)
Tantalum capacitors. Wet tantalytic capacitor seals, 458(C)
Television. Research vessel uses closed circuit TV, 265(C)
Temperature control. Controlled temperature oil baths for standard cells, 172(N)
Temperature oil baths. Controlled temperature oil baths for standard cells, 172(N)
Temperature sensitivity device. Fluid interface detector, 186(C)
Test vehicles. Sled separation tests, 456(C)

Thermal conductivity. Fluid interface detector, 186(C)
Thermal conductivity. Radial flow apparatus for thermal conductivity measurements, 168(N)
Thermal radiation. Methods for determining thermal radiation properties of materials developed, 544(N)
Thermodynamics. A note on the Carnot function, (Potter), 507
Thin film amplifier. Microminiature thin-film amplifier, 455(C)
Thin films. High resistance films produced, 89(C)
Tiros weather satellite. TV pictures of earth's weather, 188(C)
Tractors. Army and industry cooperate on new tractor, 94(C)
Transducers. New 'flextensional' transducers, 268(C)
Transducers with Hall generators. A Hall effect accelerometer (Nalecz and Ziomecki), 14
Transistors. Microminiature thin-film amplifier, 455(C)
Transuranium elements. Reactor produces rare elements in 'quantity,' 542(AE)
Transuranium elements. Recent researches on the transuranium elements (Seaborg), 459
Trucks. New tactical transporter, 455(C)
Tubes. 100-megawatt hydrogen thyratron, 456(C)
Tungsten. Mass flowmeter for Tungsten hexafluoride, 345(C)
TV satellite. TV pictures of earth's weather, 188(C)

U

Underwater glass platform. New underwater glass platform, 269(C)
Underwater TV system. Research vessel uses closed circuit TV, 265(C)

V

Vacuum evaporator. Dual-purpose electron beam, 457(C)
Vacuum furnace. New vacuum resistance furnace, 453(C)
Vacuum gauges. Vacuum gauge control system, 90(C)
Variable mass systems. Mechanics of variable mass systems (Grubin), 305
Velocity. Space shuttle simulator, 90(C)
Vibration. New shock absorber system, 271(C)
On beams with many elastic supports (Chen), 273
Nonlinear response of a beam to shock pulse (Schultz), 385
Vibration of a loaded string. Vibration of a string with attached concentrated masses (Chen), 191
Visco-elastic stability of multilayers. Stability of multilayered continua including the effect of gravity and viscoelasticity (Biot), 231
Visco-plastic media. A viscous model for plug formation in plates (Pytel and Davids), 394

W

Wave propagation in inhomogeneous media. A note on differential equations for Hertz potentials in inhomogeneous media (Samaddar), 225
Wetherill Medal: John K. Hulm, 444
John Eugene Kunzler, 444
Bernd T. Matthias, 444

X

X-Ray. X-Ray scattering data related to properties of the scatterer, 76(N)

Y

Yau, Sik-Sang: Levy Medal, 86

AUTHOR INDEX
